Introduction to Test Project

The following is a list of sections or information that must be included in all Test Project proposals that are submitted to WorldSkills.

- Contents including list of all documents, drawings and photographs that make up the Test Project
- Introduction/overview
- Short description of project and tasks
- Instructions to the Competitor
- Other

Introduction

This should be a brief introduction or overview to the design concept or background to the proposal.

This test project has been developed in alignment with WorldSkills standards, with the goal of meeting the competency requirements of the competition. The modules are designed to reflect the skills of a professional graphic designer who is capable of accurately interpreting project briefs and translating them into aesthetic, practical, and production-ready visual outputs suitable for mass production, distribution, and publication.

The scope of the project covers a wide range of media, from print to digital platforms, and from static graphics to interactive visual designs. The formats also vary in scale and structure, ranging from flat two-dimensional media to three-dimensional printed constructions. Through this balanced and comprehensive approach, participants are encouraged to demonstrate their creativity, technical proficiency, and professional readiness with confidence and clarity.

Description of project and tasks

This should provide a description of the overall project and tasks broken down into the smaller milestones or modules. It may also include a summary of the assessment for each project or task.

The test project or module may consist of the following aspects:

Corporate and Information Design

(Logos and their applications, signage, symbols, graphics, tables, wayfinding systems, social media elements, or similar components) May include multiple lines of text, illustrations, logo creation, symbols, vector images, or similar requirements.

Packaging Design

(Regular boxes, tray boxes, tear-open packaging, labels for existing packaging, containers, or similar products) May include text, titles, and other information as specified by the test project.

Editorial Design and Digital Publishing

(Covers and/or interior pages, brochures, restaurant menus, newspapers, booklets, e-books, data integration, simple animated GIFs, interactive forms, image slideshows, or similar communication projects).

May include titles, subtitles, body text, images, graphics, tables, master elements, and other relevant components. Digital publishing design may serve as an addition to or a replacement for print publications.

Advertising and Display Design with New Media

(Social media content, digital information screens, mobile app icons, UI & UX design, menus, merchandise, posters, banners, billboards, vehicle wraps, full-page advertisements, large-format designs, or similar requests). May include multiple lines of text or slogans, image manipulation or photo montages, the use of large files, or similar specifications.

Instructions to the Competitor

This would be the instructions that would be given to the Competitor if doing this project. The instructions can be increased and improved at the Competition during the preparation time.

The scope of work will include the following activities:

- Designing hand-drawn manuals in accordance with the module guidelines.
- Conducting photography and/or scanning, converting materials into digital files, and optimizing images using appropriate tools for adjustment and manipulation.
- Creating or recreating information design elements such as diagrams, charts, and maps.
- Creating storyboard sequences for motion graphic design
- Producing digital motion graphic works
- Designing packaging surfaces with graphic elements
- Performing vector tracing of pixel-based logos and simple images such as symbols and icons.
- Converting digital manuscripts into properly formatted typographic text.
- Producing graphic designs in 3D formats, such as packaging, bags, and similar items.
- Embedding media objects, such as videos and audio tracks, into publications.
- Transforming non-interactive objects into interactive elements to enhance user engagement, including the implementation of clickable buttons, text frames, and graphic frames.
- Applying color formats suitable for both digital and print production.
- Compiling and submitting final works using specified file formats and standardized naming conventions.

Other

Use this section for information that is important but is not covered in the previous sections.

The module structure will be as follows:

- The competition will consist of four (4) independent modules. These modules will not be interconnected or continuous.
- The module structure will follow the WorldSkills Competition framework, with adjustments to the level of difficulty, application techniques adopted from LKSN 2024, and the allocated working time.
- Each module will be assessed by different judges according to their respective areas of expertise.

The modules will not be distributed prior to the competition. They will be made publicly available no earlier than one week after the competition through the following link:

bit.ly/gdt-arsip-modul

Participants are encouraged to study the modules using the latest archived materials available at this link.

The glossary is a list of important terms commonly used and applied in the competition modules. Participants are advised to review the glossary available at the following link:
